

Varsha Chouhan

Java Backend Developer | Full Stack Developer (MERN)

varshachouhan0410@gmail.com | +91-6267096668 | github.com/varshasingh04 | linkedin.com/in/varsha-chouhan-4290342a7

Open to Relocate Across India | Available for Remote Opportunities

PROFESSIONAL SUMMARY

Final-year B.Tech Computer Science student with hands-on internship experience building production-grade payment and webhook systems using Java 17 and Spring Boot 3. Independently developed two full-stack projects spanning MERN, React Native, and AI integrations. Comfortable working across the backend and frontend, with a focus on writing clean, testable code. Seeking fresher, entry-level, or internship roles in Java Backend, Full Stack, or Software Engineering.

EDUCATION

B.Tech, Computer Science and Engineering

Expected: June 2026

MATS University, Raipur, Chhattisgarh | CGPA: 7.0 | Relevant: DSA, DBMS, OS, Computer Networks, OOP, Software Engineering

EXPERIENCE

Software Engineering Intern | Paladin Educators LLP (EdTech startup)

Aug 2025 - Oct 2025 | Remote

- Built a Payment Confirmation Module for an e-learning platform using Java 17 and Spring Boot 3, handling Razorpay and Stripe webhook events.
- Implemented webhook security with HMAC signature verification, idempotency checks, and replay-attack protection to prevent duplicate course enrollments.
- Modeled Payment, Enrollment, and AuditLog entities in MySQL using Spring Data JPA and Hibernate; wrapped payment and enrollment updates in a single transaction so a failed enrollment never left a completed payment unrecorded.
- Wrote unit and integration tests with JUnit 5 and Mockito (measured via JaCoCo), achieving strong coverage on the payment package and catching critical edge cases — including a duplicate enrollment scenario on Stripe retry events — before production release.
- Documented all API endpoints using OpenAPI/Swagger; worked in an Agile team using Git, GitHub, and Jira.

PROJECTS

Vamra - AI Business Card Scanner | Team Project | React Native, Expo, GPT-4o Vision, SQLite, Push Notifications

- Built an Android app that scans business cards via camera and uses GPT-4o Vision to extract name, phone, email, company, and role into structured contacts in under 5 seconds.
- Implemented a URL-based contact enrichment feature that fetches a company website, summarizes the business, and auto-tags the contact with relevant keywords for faster search.
- Designed offline-first local storage with SQLite and natural-language search so users can find contacts by phrases like 'marketing folks from April' without a backend dependency.
- Added a push notification reminder system using Expo Notifications for follow-up nudges; submitted to Google Play Store — APK available on request for demo.

PawCare - Pet Community and Services Platform | React.js, Node.js, Express.js, MongoDB, GPT-4o

- Built a full-stack pet community platform with user profiles, blog publishing, and a local pet services directory using the MERN stack. (Live: [client-mu-orcin.vercel.app](#))
- Developed an AI-assisted blog editor using GPT-4o that generates structured drafts from bullet notes, helping users publish content significantly faster.
- Implemented role-based access control for service providers vs. regular users, with a moderation queue for new service listings to maintain listing quality.
- Structured the MongoDB schema with geolocation indexing to support location-based pet service queries — no third-party maps API required.

TECHNICAL SKILLS

Languages: Java (Core and Advanced), Collections Framework, JavaScript (ES6+), SQL, HTML5, CSS3

Backend: Spring Boot 3, Spring Data JPA, Spring Security, Hibernate, REST APIs, JWT, Microservices, Node.js, Express.js, SOLID Principles, Design Patterns, Multithreading

Frontend and Mobile: React.js 18, React Native (Expo), Redux Toolkit, Tailwind CSS, Expo Notifications

Databases: MySQL, PostgreSQL, MongoDB, Mongoose ODM, SQLite

Cloud and Tools: Git, GitHub, Docker, Maven, Postman, Swagger/OpenAPI, JaCoCo, Jira, Linux, IntelliJ IDEA, Mockito, Vercel

CERTIFICATIONS AND ACHIEVEMENTS

- Java Programming Masterclass – Udemy (100+ hrs): Core Java, OOP, Collections, Concurrency, JDBC
- Complete MERN Stack Developer – Udemy (80+ hrs): MongoDB, Express.js, React.js, Node.js, REST API design
- Solved 100+ DSA problems on LeetCode across Arrays, Trees, Dynamic Programming, and Graphs; strong problem-solving and analytical skills
